TACTICAL SOC PLATFORM

Tactical and mobile SOC solution
for advanced cyber defence

AIRBUS

Mobile SOC solution for advanced cyber defence

Defence organisations need to be ready to detect, investigate and respond to cyber attacks in all terrains, including the most hostile.

Airbus Defence and Space Cyber's Tactical SOC, used by the French Armed Forces, provides SOC monitoring of critical systems, whether deployed during operational exercises, on the battlefield or beyond.

ADVANTAGES OF THE TACTICAL SOC

- High performance and safe
- Ergonomic and modular design
- Robust and deployable

THE TACTICAL SOC SOLUTION

- **Projected in theatres of operation** and deployed on national and international operational exercises
- Helps **defend the information systems of the French armed forces** against cyber-attacks
- **Offers detection and response capabilities**, provided by a unified supervision and investigation system
- Supplied with **supervision support**

1. PERFORMANCE AND SECURITY

- **Detection and investigation** through analysis of supervised system logs and sensors
- **Advanced network decryption**, detection and investigation using probes and full traffic logging
- **Network extraction and file analysis** using the **Orion Malware®** tool developed by Airbus Defence and Space Cyber
- **Centralised supervision** with presentation and prioritisation of incidents via a business view
- **Orchestration of alert** qualification and investigation of cyber incidents
- **Strong and unique authentication** to the system via the **CymID®** solution developed by Airbus Defence and Space Cyber
- **Integration of threat intelligence** and search for IoCs

2. ROBUSTNESS AND DURABILITY OF SOLUTIONS

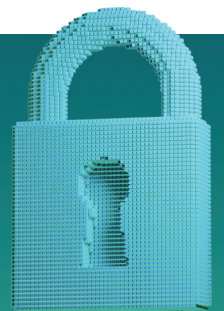

- **3rd generation projectable SOC system** supplied to the armed forces
- **Training and support** for exercises to ensure the system's appropriation
- **Deployment and supervision support**
- **Hotline and Maintenance** in operational conditions and maintenance in security conditions
- Drawing on Airbus Defence and Space Cyber's **expertise as an architect and integrator** of secure SOC systems, including projectable systems

3. ERGONOMY AND MODULARITY

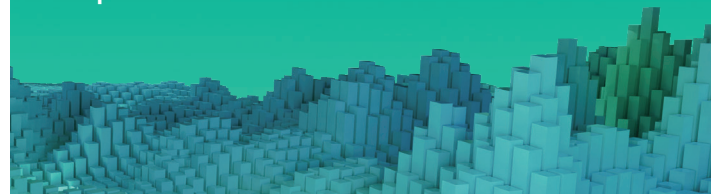

- **Projectable and air-transportable** boxes for easy deployment
- **Highly modular**, enabling you to build a tailor-made SOC ecosystem depending on the deployment and operational context (from 'All-in-One' boxes to boxes distributed over remote sites and operable from a central site)
- **Secure remote access** to facilitate multi-site operation

Airbus Defence and Space Cyber

As the European leader in cyber security and an end-to-end integrator, we are a trusted partner for Airbus, governments, armed forces and operators of vital importance.

We work with you as an
architect and integrator
for all your cyber
defence needs

We design advanced end-to-end cyber protection solutions

Airbus Defence and Space Cyber supports you at every stage of your requirements:

- Design of secure architecture and support with certification
- Construction of a customised solution
- Development and integration of the solution
- System security validation
- Maintenance in operational and security conditions
- Security audits
